

QIAGEN Supplementary Protocol:

Purification of total DNA from crude lysates using the DNeasy® Blood & Tissue Kit

This protocol is designed for purification of DNA from a 200 µl crude lysate.

Introduction

This protocol is recommended for purification of DNA from samples that do not have a specific DNeasy protocol. Optimal lysis conditions must first be determined for the chosen sample. Samples are lysed using a sample-specific lysis buffer and then processed according to the standard DNeasy tissue protocol.

IMPORTANT: Please read the *DNeasy Blood & Tissue Handbook*, paying careful attention to the “Safety Information” and “Important Notes” sections, before beginning this procedure. DNeasy Blood & Tissue Kits are intended for research use. No claim or representation is intended to provide information for the diagnosis, prevention, or treatment of a disease.

Equipment and reagents required

When working with chemicals, always wear a suitable lab coat, disposable gloves, and protective goggles. For more information, consult the appropriate material safety data sheets (MSDSs), available from the product supplier.

- DNeasy Blood & Tissue Kit (cat. no. 69504 or 69506)
- Pipets and pipet tips
- Vortexer
- Microcentrifuge tubes (1.5 ml or 2 ml)
- Microcentrifuge with rotor for 1.5 ml and 2 ml tubes
- Ethanol (96–100%)*
- Sample-specific lysis buffer
- Acid may be required for some samples, to adjust the pH in step 3

Important points before starting

- If using the DNeasy Blood & Tissue Kit for the first time, read “Important Notes” in the *DNeasy Blood & Tissue Handbook*.
- All centrifugation steps are carried out at room temperature (15–25°C) in a microcentrifuge.
- Vortexing should be performed by pulse-vortexing for 5–10 s.

* Do not use denatured alcohol, which contains other substances such as methanol or methylethylketone.

Things to do before starting

- Optimal lysis conditions must first be determined for the chosen sample. DNeasy lysis buffers may not be suitable for all sample types.
- Buffer ATL and Buffer AL may form precipitates upon storage. If necessary, warm to 56°C until the precipitates have fully dissolved.
- Buffer AW1 and Buffer AW2 are supplied as concentrates. Before using for the first time, add the appropriate amount of ethanol (96–100%) as indicated on the bottle to obtain a working solution.
- If using frozen samples, equilibrate the sample to room temperature. Avoid repeated thawing and freezing of samples since this will lead to reduced DNA size.

Procedure

1. Lyse sample in 200 µl of a sample-specific lysis buffer.

If a larger volume of lysis buffer is required, use 400 µl lysis buffer and double the amounts of proteinase K, Buffer AL, and ethanol in steps 2, 3, and 4.

2. Add 20 µl proteinase K.

3. Add 200 µl Buffer AL (without added ethanol) to the sample, and mix thoroughly by vortexing. Check the pH of the lysate. If necessary, adjust the pH with acid so that it is <7.0.

The lysate must be acidic (pH <7.0) to obtain maximum binding of DNA to the DNeasy membrane.

Ensure that ethanol has not been added to Buffer AL (see “Buffer AL” in the *DNeasy Blood & Tissue Handbook*). Buffer AL can be purchased separately.

It is essential that the sample and Buffer AL are mixed immediately and thoroughly by vortexing or pipetting to yield a homogeneous solution.

4. Add 200 µl ethanol (96–100%), and mix again thoroughly by vortexing.

It is important that the sample and the ethanol are mixed thoroughly to yield a homogeneous solution.

5. Pipet the mixture from step 4 (including any precipitate) into the DNeasy Mini spin column placed in a 2 ml collection tube (provided). Centrifuge at $\geq 6000 \times g$ (8000 rpm) for 1 min. Discard flow-through and collection tube.*

6. Place the DNeasy Mini spin column in a new 2 ml collection tube (provided), add 500 µl Buffer AW1, and centrifuge for 1 min at $\geq 6000 \times g$ (8000 rpm). Discard flow-through and collection tube.*

* Flow-through contains Buffer AL or Buffer AW1 and is therefore not compatible with bleach. See *DNeasy Blood & Tissue Handbook* for safety information.

- 7. Place the DNeasy Mini spin column in a new 2 ml collection tube (provided), add 500 μ l Buffer AW2, and centrifuge for 3 min at 20,000 x g (14,000 rpm) to dry the DNeasy membrane. Discard flow-through and collection tube.**

It is important to dry the membrane of the DNeasy Mini spin column, since residual ethanol may interfere with subsequent reactions. This centrifugation step ensures that no residual ethanol will be carried over during the following elution.

Following the centrifugation step, remove the DNeasy Mini spin column carefully so that the column does not come into contact with the flow-through, since this will result in carryover of ethanol. If carryover of ethanol occurs, empty the collection tube, then reuse it in another centrifugation for 1 min at 20,000 x g (14,000 rpm).

- 8. Place the DNeasy Mini spin column in a clean 1.5 ml or 2 ml microcentrifuge tube (not provided), and pipet 200 μ l Buffer AE directly onto the DNeasy membrane. Incubate at room temperature for 1 min, and then centrifuge for 1 min at ≥ 6000 x g (8000 rpm) to elute.**

Elution with 100 μ l (instead of 200 μ l) increases the final DNA concentration in the eluate, but also decreases the overall DNA yield (see *DNeasy Blood & Tissue Handbook*).

- 9. Recommended: For maximum DNA yield, repeat elution once as described in step 8.**

This step leads to increased overall DNA yield.

A new microcentrifuge tube can be used for the second elution step to prevent dilution of the first eluate. Alternatively, to combine the eluates, the microcentrifuge tube from step 8 can be reused for the second elution step.

Note: Do not elute more than 200 μ l into a 1.5 ml microcentrifuge tube because the DNeasy Mini spin column will come into contact with the eluate.

Troubleshooting

For general troubleshooting, please consult the Troubleshooting Guide in the *DNeasy Blood & Tissue Handbook*.

QIAGEN kit handbooks can be requested from QIAGEN Technical Services or your local QIAGEN distributor.

Selected kit handbooks can be downloaded from www.qiagen.com/literature/handbooks/default.aspx.

Material safety data sheets (MSDS) for any QIAGEN product can be downloaded from www.qiagen.com/ts/msds.asp.
